

## Declaration of conformity for PULS ML60 in CMC systems

We hereby declare that the power supply PULS ML60.242 can replace all existing 100-240VAC 24V 60W power supplies delivered from Cavotec Micro-control.

The PULS ML60.242 power supply has better EMC quality and efficiency (90.4%) than all the power supplies used in former systems.

The PULS ML60.242 can be used in EX systems (including EX d) and standard NON-EX systems.

When replacing the power supply in an EX d enclosure Cavotec Micro-control needs a picture of enclosure after the change and information of serial number of the system so we can update our system drawings.
